Preview and Apply Themes

Your theme developer creates themes that determine the look and feel of your site (if you are using an implementation that includes a site) or your customized Fulfiller interface.

To display available themes, go to **Main** > **Content** > **Themes**.

You can click the dots next to each theme to:

- Preview the theme on your site.
- View or edit the theme settings.
- Apply the theme to your site.
- Remove the theme from your site.

Theme settings vary depending on the theme and may be different for each display device. Examples of theme settings include banner image styles, search result options, font types, and navigation features. Your sandbox has the Core Kibo theme available for use on your site, as well as any custom theme your theme developer may have installed.

> Note that changes to these settings may not immediately take effect. It may take up to 15 minutes for updates to be reflected in the system while the cache refreshes.
