

# Coupon Sets

Coupon sets are collections of coupons that you can associate with one or more discounts. For example, you may want to create 1,000 coupons to use for a free shipping promotion on your site. To accomplish this, you create a generated coupon set and specify to create 1,000 coupons and then associate the coupon set with a free shipping discount.

You can create a coupon set before creating a discount. You can first create a coupon set, and then create a discount and associate the coupon set you created with the discount. Refer to the [Configure Discounts documentation](#) for more information about associating coupon sets with discounts in the Discounts module.

You can use the import/export tools to quickly import and export your coupon sets. Refer to the [Marketing Template](#) for more information.

## Coupon Set Types

There are two types of coupon sets:

- **Manual Coupon Sets:** Allow you to specify the entire coupon code for every coupon in the coupon set.
- **Generated Coupon Sets:** Allow you to specify only a coupon code prefix that every coupon code in the coupon set starts with.

For example, you want to create 1,000 coupons for a free shipping promotion on your site and you don't want to manually enter the entire coupon code for all 1,000 coupons. To accomplish this, you create a generated coupon set and you specify to create 1,000 coupons that all start with a custom prefix.

## Create a Manual Coupon Set

To create a manual coupon set:

1. Go to **Main > Marketing > Coupon Sets**.
2. Click **Create New Coupon Set > Manual Coupon Set**.
3. Specify a **Name** for the coupon set.
4. **(Optional)** Specify a **Start Date** and an **End Date** for the coupon set.

The **Start Date** and **End Date** fields specify when the coupons in the coupon set are active and in effect. You can specify either a Start Date, an End Date, or both.

5. Specify the **Max Redemptions (Per Code)** and **Max Redemptions Per Customer (Per**

**Code).**

### General

Name \*

Example Coupon Set

Start Date

2/7/2021 6:34 pm

End Date

2/10/2023 6:34 pm

Max Redemptions (Per Code)

100

Max Redemptions per Customer (Per Code)

10

You can also set maximum redemption amounts [at the discount level](#). If you have only selected a maximum here at the coupon set level, then the discount code will work regardless of whether the shopper is logged into their customer account or not. If you have set a maximum at the discount level, then the code will only work if the shopper is logged in.

6. Click **Save & Continue**. The modal will expand to include the **Codes** and **Discounts** sections.

7. In the **Codes** section, enter your desired coupon code(s) and click **Add**.

If you already have coupon codes created, you can use the search box and the filter to find and add your coupon codes to the coupon set.

8. **(If applicable)** If you want to associate the coupon set with discount(s) that you've already created:

- In the **Discounts** section, either search for the discount(s) for which you want the coupon set to be associated with or use the drop-down menu to select the discount(s).
- Click **Enter**.

<b>Codes</b>							
Type one or more new codes and hit ENTER key or click Add button							
<input type="text"/> Search							
						Redemption Count	
RD0D04						0	
RD0D03						0	
RD0D02						0	
RD0D01						1	
rd_01_code						4	
<b>Discounts</b>							
Search for discount and hit ENTER key to Add							
Name	Type	Applies To	Start Date	End Date	Status	Coupon Code	Used
Discount1	10% OFF	Nothing	2/9/2021 6:37 am	2/10/2023 6:38 am	Active	Multiple Codes	5
Discount2	10% OFF	Nothing	2/9/2021 6:37 am	3/30/2021 6:38 am	Ended	Multiple Codes	

9. Click **Save**.

## Create a Generated Coupon Set

To create a generated coupon set:

1. Go to **Main > Marketing > Coupon Sets**.
2. Click **Create New Coupon Set > Generated Coupon Set**.
3. Specify a **Name** for the coupon set.
4. **(Optional)** Specify a **Start Date** and an **End Date** for the coupon set.

The **Start Date** and **End Date** fields specify when the coupons in the coupon set are active and in effect. You can specify either a Start Date, an End Date, or both.

5. Specify the **Max Redemptions per Code** and **Max Redemptions per Customer**.
6. In the **Code Configuration** section, enter the **Number of Codes** you wish to generate.
7. Enter a **Code Prefix**. The **Code Prefix** specifies the prefix of all the coupon codes in the coupon set. Click **Suggest** to have Kibo eCommerce suggest a code prefix for you. You can preview what the coupon codes will look like in the **Preview** window.

## Remove a Coupon Set

You can delete manual and generated coupons set through either the UI or Catalog API. To remove a coupon set via API, simply make a DELETE call to the [Delete Coupon Set API](#) endpoint with the appropriate coupon set code in the path.

To remove a coupon set via the interface:

- Go to **Main > Marketing > Coupon Sets**.
- Expand the dropdown menu on the right of a coupon set in the table and click **Delete**.

3. If the coupon set is currently in its active date range, a pop-up will ask you to confirm. Click **Yes**.
- You do not have to deactivate the coupon before deleting, but Kibo recommends making sure a coupon is no longer in use first. You can access coupon settings by clicking **Edit** instead of **Delete** in the previous step.
