

Tax Settings

When configuring tax settings, consider the following questions:

- Is your site tax exempt?
- Which states within the United States do you need to collect taxes from?

Configure Tax Settings

To configure tax settings:

1. Go to **System > Settings > Tax**.
2. Select the **Tax Exempt** checkbox if your site is tax exempt. If not, select the locations you need to charge tax for from the **Collect Taxes for the Following States** drop-down menu.
3. Click **Save**.

Use the context switcher to repeat these steps for each site.

Consider using the Avalara AvaTax Integration if you need additional tax functionality. The Avalara AvaTax Integration is an application that you can install to integrate your sites with Avalara's AvaTax software. Visit the [Kibo eCommerce Marketplace](#) for more information about this integration.

Value-added tax (VAT) is not natively supported by the Kibo Composable Commerce Platform. An external tax provider such as [Avalara](#) or [Vertex](#) must be integrated in order to handle VAT.
