

Contentful Integration

Kibo provides an application to integrate between Contentful, a leading Content Management System (CMS), and the Kibo Catalog service. This application connects your catalog to reference your products inside of Contentful and streamline your content management to ensure a consistent shopping experience across all of your sites, marketplaces, and points of sale.

For information on Contentful, see their [website](#) and [developer portal](#).

Requirements

You must have a Contentful account, as the application is installed and managed within Contentful rather than Kibo's Dev Center.

To authorize the application, you will also need to know your Kibo Client ID and secret.

Installing the App

Navigate to **Apps > Manage Apps** in the Contentful interface. This page will include a list of all available applications in which you can find Kibo Commerce. Click this application to view more information and install it. Clicking **Install** will open a configuration screen.

Configuring the App

Contentful will prompt you to provide your Auth Host, Kibo Client ID, Shared Secret, and API Host. These values should be the same as you would use for any other Kibo application.

Finally, you must assign your products to Contentful fields in order to enable products. Check the **Kibo Standard Product** and **Product** options in this section. Note that all products will be displayed as the "Kibo" product type in Contentful.

Assign to fields

This app can only be used with **Short text** or **Short text, list** fields. Select which fields you'd like to enable for this app.

Kibo Product

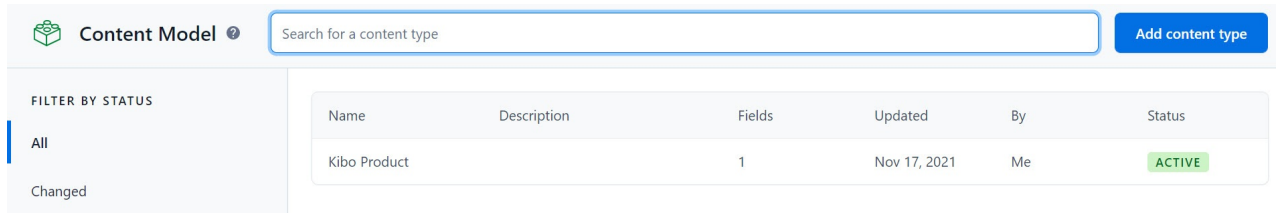

- Kibo Standard Product**
Short text, list · Field ID: kiboStandardProduct
- Product**

Click **Install** in the top right to confirm your settings and complete the installation process. You can return to **Apps > Manage Apps** again at any time to view your Kibo application and edit these configurations.

The screenshot shows a mobile application interface for configuring the 'Kibo Commerce' app. At the top, there is a navigation bar with a back arrow, the app name 'Kibo Commerce', a 'PRIVATE' status indicator, and an 'Install' button. The main content area is a white card with a dark blue header and footer. The card is titled 'About Kibocommerce' and contains a brief description of the app's integration. Below this is a 'Configuration' section with four required fields: 'Auth Host', 'Client ID', 'Shared Secret', and 'API Host', each with a text input field and a label. The bottom section is titled 'Assign to fields' and contains a 'Kibo Product' section with two options: 'Kibo Standard Product' (checked) and 'Product' (unchecked). The 'Kibo Standard Product' option is accompanied by the text 'Short text, list · Field ID: kiboStandardProduct'.

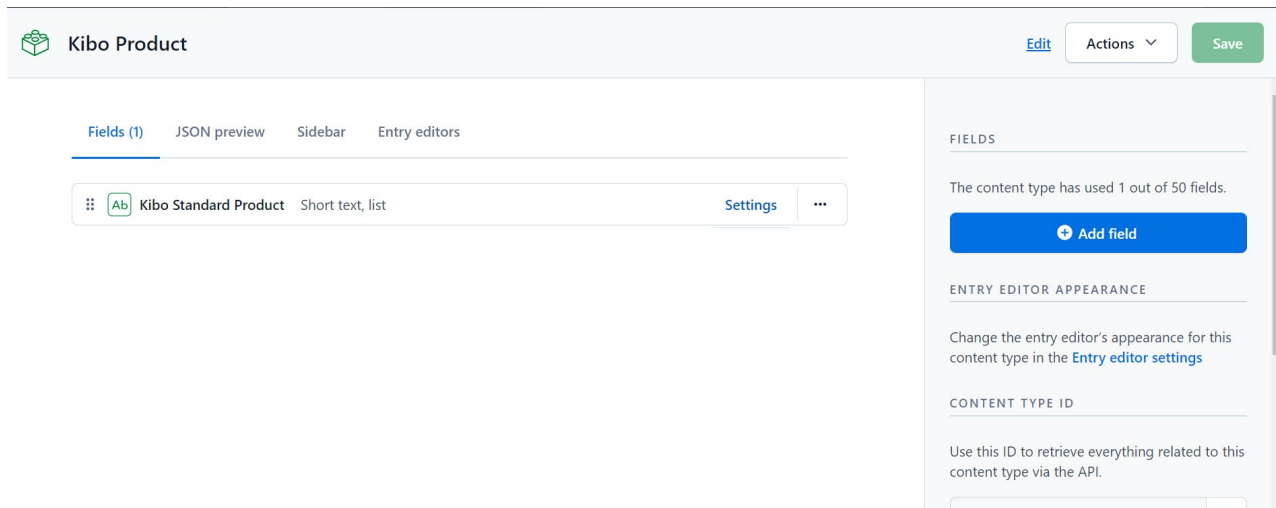

The Content Page

The **Content Model** page allows you to manage your content types. As mentioned above, "Kibo Products" will be the only type supported for products imported via the application.

The screenshot shows the 'Content Model' page. At the top, there is a search bar labeled 'Search for a content type' and an 'Add content type' button. Below the search bar is a table with columns: Name, Description, Fields, Updated, By, and Status. The table contains one row for 'Kibo Product' with 1 field, updated on Nov 17, 2021, by 'Me', and a status of 'ACTIVE'. On the left side, there is a 'FILTER BY STATUS' section with 'All' selected and 'Changed' as an option.

If you click the Kibo Product, then the UI will open the below page where you can access additional settings. However, Kibo recommends that you do not make any changes here as they will not work as expected with Kibo products.

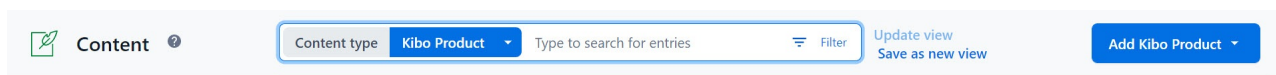

The screenshot shows the 'Kibo Product' settings page. At the top, there is a header with 'Kibo Product', an 'Edit' button, an 'Actions' dropdown, and a 'Save' button. Below the header, there are tabs for 'Fields (1)', 'JSON preview', 'Sidebar', and 'Entry editors'. The 'Fields (1)' tab is active, showing a list of fields with a 'Settings' button and a three-dot menu. On the right side, there is a sidebar with sections: 'FIELDS' (indicating 1 out of 50 fields used and an 'Add field' button), 'ENTRY EDITOR APPEARANCE' (with a link to 'Entry editor settings'), and 'CONTENT TYPE ID' (with a note about using the ID via the API).

Adding Kibo Products

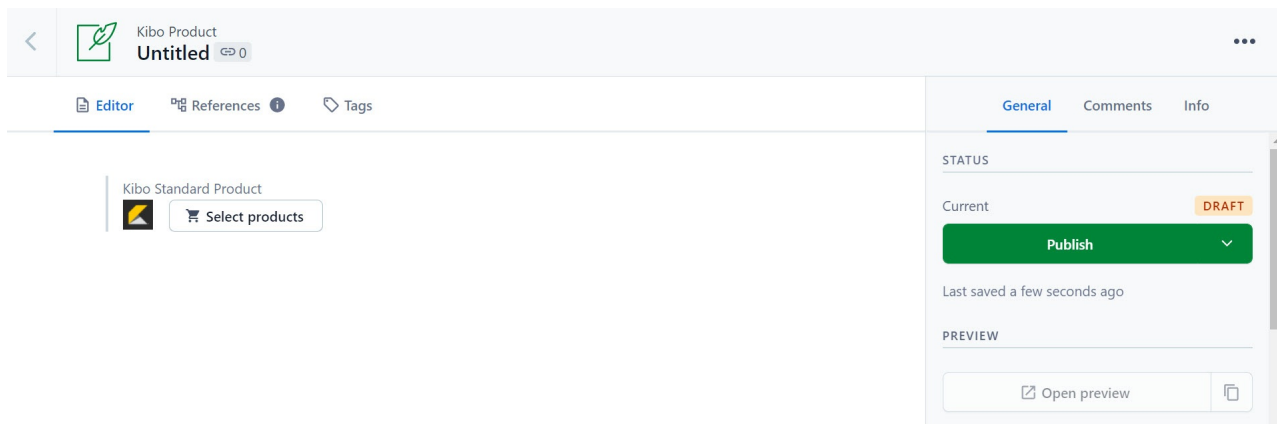

On the **Content** page, you can add selected products from your Kibo catalog to Contentful. If you have other content types in your account, then you must select "Kibo Product" from the dropdown list in the search bar. If you do not have any other content, then Kibo Product will be automatically populated.

Click **Add Kibo Product** in the top right.

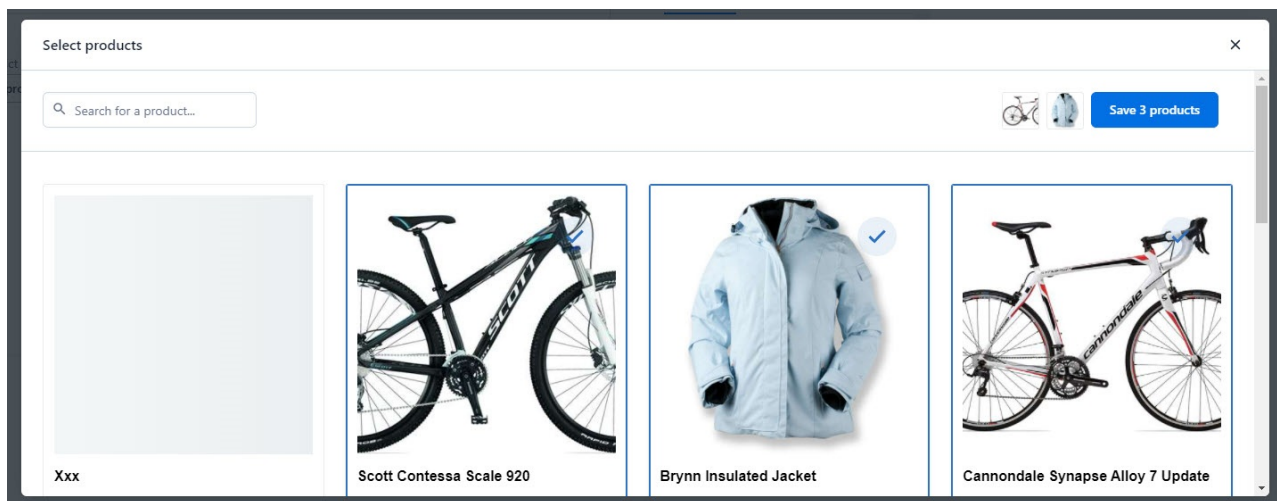

The screenshot shows the 'Content' page. At the top, there is a header with 'Content', a search bar with 'Content type' set to 'Kibo Product', a search input field, a 'Filter' button, and an 'Add Kibo Product' button. Below the header, there are links for 'Update view' and 'Save as new view'.

From this page, click **Select products** in the left pane.

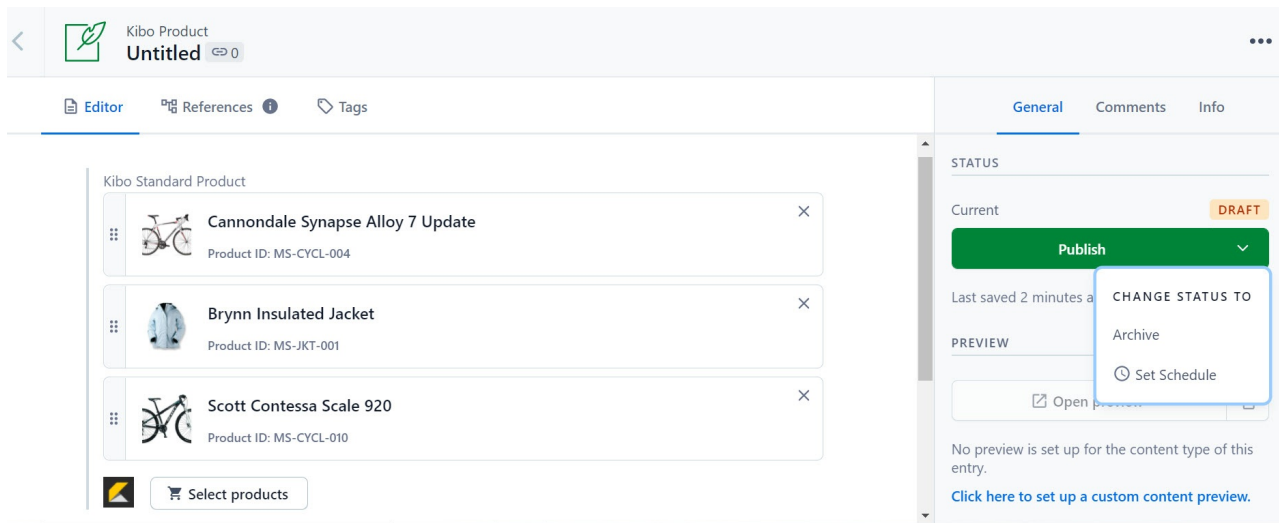

This will open a navigation module allowing you to view your catalog. Select one or more products that you want to add and click **Save # products** in the top right.

Your selections will now display on the page and this update will be saved in draft status. To remove any selections, click the **X** in the corner of the product listing. You can also drag and drop them to change their order.

When satisfied, click **Publish** on the right to publish your content entry. Alternatively, you can archive it instead or schedule it for publishing at a later date.

Next Steps

For more information about managing products and content entries, see [Contentful's guides and tutorials](#).
