

Add Custom Attributes

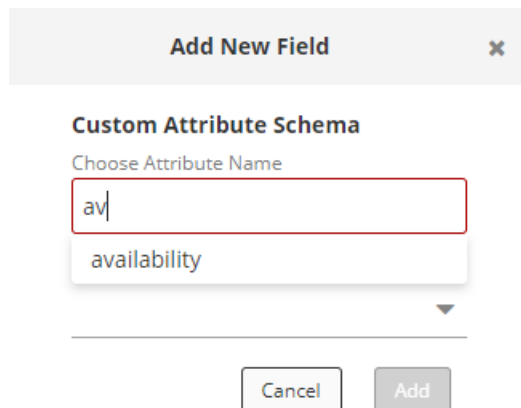

1. From the list, click **Add**.
2. Choose **Custom Attribute** from the Schema Type drop-down menu and then click **Next**.

The screenshot shows the 'Schema Editor' interface for 'Mystic Outdoors Master'. A modal dialog titled 'Add New Field' is open, displaying a search for 'Custom Attribute' in the 'Choose Schema Type' dropdown. A red arrow points to the 'Add' button in the background table. The table lists existing fields with their names and codes, and a 'Delete' button for each.

Field/Attribute Name		
productCode		Delete
productCode		Delete
childProductCodes	code_exact	Delete
childProductCodes	code_lenient	Delete

3. Search for the field you need by typing and then selecting from the available choices. Because these are more numerous than Core Fields, there is no drop-down to scroll to your selection.

This close-up shows the 'Add New Field' dialog box with the 'Custom Attribute Schema' section. The 'Choose Attribute Name' search box contains 'av', and the dropdown menu shows 'availability' as a suggestion. 'Cancel' and 'Add' buttons are visible at the bottom.

4. Choose the Type and then click **Add**. The popup will close, and the new entry will be visible in the list.

Mystic Outdoors Master (MASTER) ▼

Language
English (United States) ▼

Field/Attribute Name	Field/Attribute Type	<input type="button" value="Add"/>
productCode	code_exact	<input type="button" value="Delete"/>
productCode	code_lenient	<input type="button" value="Delete"/>
childProductCodes	code_exact	<input type="button" value="Delete"/>

Once you have saved any changes, you have two options.

- To have your changes reflected in your site, click **Publish Now**.
- If you have made and saved changes in error (but not yet published), then you may click **Revert** to go back the prior saved changes. This will *not* revert to a former published version unless there have been no other saved changes.
