

Product Slicing within Search

Click the radio button to enable Product Slicing. This allows variations of a product to be listed separately without creating individual product listings. Product Slicing must be [configured separately](#).

The screenshot shows a configuration page for search settings. At the top, there is a dark purple header with a menu icon and the text "Search Configurations Example Configuration". Below this is a navigation bar with tabs for "General", "Site Search", "Category Suggestion", "Product Suggestion", and "Listing". The "Site Search" tab is selected. The main content area is titled "Site Search" and contains a section for "Personalization Experience Identifier". This section has two input fields: "Personalization Exp ID" with the value "sdfdsf" and "Factor (0.1 - 100.0)" with the value "1". Below this is a "Settings" section with four items: "Show Product Slicing" (checkbox, highlighted with a red box), "MinMatch (0-100%)" (input field with "75" and a "+" button), "Two Word Phrase Boosting" (checkbox), and "Phrase Slop" (input field with "0").
