

# Display Groups

When [adding property attributes to a product type](#), you can specify whether the property and its values are available to be displayed on specific storefront page types using the **Display Group** drop-down menu.

You can control whether or not a property is actually displayed on your storefront using your theme. The **Display Group** selection only specifies whether or not the property is available to your theme on specific storefront page types.

## Display Group Options

Refer to the following table for more information about the possible display group selections:

Display Group	Description
<b>Storefront Details and Listings</b>	The property and its values are available on product detail pages as well as product listing pages, such as categories and search results.
<b>Storefront Details</b>	The property and its values are available only on product detail pages.
<b>Admin Only</b>	The property and its values are not available on storefront pages, and display only in Admin.

## Set Display Group

To specify a **Display Group** selection:

1. Go to **System > Schema > Product Types**.
2. Click the product type you want to assign to a display group.
3. In the **Properties** section, select a value in the drop-down **Display Group** menu.
