The dimensions included in this view are:

Name	Data Type	Description
Goods Type	String	The type of goods in a bundled product. A bundled product is composed of products associated to sell together. Possible values include Physical and DigitalCredit.

Name	Data Type	Description
Item Fulfillment Status	String	The current fulfillment status of the item such as Fulfilled, NotFulfilled, or PartiallyFulfilled.
Item Shipping Amount	Number	The calculated total shipping amount for the order item including tax.
Item Taxable Amount	Number	The monetary amount of an item that is subject to tax. This amount typically represents the line item subtotal before applied discounts for an order.
Order Item ID	String	Internal unique identifier of the order item.
Product Code	String	The unique user-defined identifier for a product.
Product Loss Amount	Number	The total value of the product returned to the merchant for accounting purposes, calculated by multiplying the cost of the item by its quantity returned.
Product Loss Tax Amount	Number	The total tax amount levied on the product loss amount.
Product Name	String	The user supplied name of the product.
Product Price	Number	Full price of the product.
Product Sale Price	Number	The set sale price for a product consisting of a price with a discount already applied.
Quantity	Number	The number of units of the item ordered.
Quantity Received	Number	The actual quantity received for the return item.

Name	Data Type	Description
Quantity Restockable	Number	The quantity of returned items that can be returned to active product stock.
Quantity Shipped	Number	The quantity of the item shipped to the shopper in the event of a return item replacement.
Reason	String	The reason the item was returned.
Return ID	String	The internal unique identifier of the return.
Return Item Created Date	Datetime	The timestamp of the date and time the return item was created.
Return Item ID	String	The internal unique identifier of the return.
Return Item Updated Date	Datetime	The timestamp of the date and time the return item was most recently updated.
Return Number	String	A merchant-specific identifier used to sequentially order returns.
Return Type	String	The type of return, which is Refund or Replace.At the top-level return level, this field is deprecated because Refund and Replace items can now be mixed within a single return. For backwards-compatibility with older applications, the field defaults to Replace.
Shipping Loss Amount	Number	The total value of shipping the returned product to the merchant for accounting purposes, calculated by multiplying the shipping cost of the item by its quantity returned.
Shipping Loss Tax Amount	Number	The tax amount levied on the shipping loss amount.
Site ID	Number	Unique identifier for the site. This ID is used at all levels of a store and catalog to associate objects to a site.

Name	Data Type	Description
Total With Weighted Shipping And Handling	Number	The total cost with shipping and handling applied.
Total Without Weighted Shipping And Handling	Number	The total cost without shipping and handling applied.
