

Adyen Application

Adyen is a digital payment platform allowing you to process payments online, in-person, and cross channel. Kibo's Adyen Integration application enables you to easily add Adyen's payment functionality to your existing eCommerce payment options.

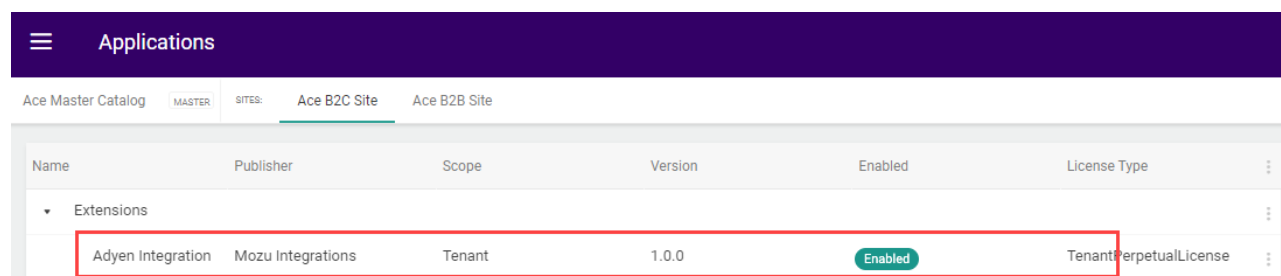

Setup Overview

The following steps are required before you can use Adyen on your site(s):

1. Contact and request for the Adyen application to be installed on your tenant.
2. Kibo will install the application and configure your payment gateway adapter.
3. Create an Adyen gateway on your Payment Settings page.

Enable the App

After configuration, you can go to **System > Customization > Applications** in the Admin UI and confirm that the Adyen Integration application is listed and enabled. You can disable it here if ever needed.

Configure Payment Gateway

Create a new payment gateway for Adyen:

1. Go to **System > Settings > Payment Gateways**.
2. Click **Create New Payment Gateway**.

3. In the Payment Gateway drop-down menu, select the Adyen app.
4. Provide your **Secret API Key**.
5. Click **Save**.
