

Create From Cart (After)

This action occurs after a checkout is created from the cart. Changes made to the order items in this action persist in Kibo.

Action Type	Embedded
Full Action ID	embedded.commerce.checkouts.createFromCart.after
Runs multiple custom functions?	No

JavaScript File Structure

Action files share the following basic structure:

```
module.exports = function(context, callback) {  
  // Your custom code here  
  callback();  
};
```

When you code the custom function for an action, you have access to two arguments:

callback —This argument follows the established JavaScript callback pattern: it takes an error as the first argument (or null if there is no error) and a result as the second argument (if required).

context —This argument provides the function access to relevant objects and methods that interface with Kibo.

Context: Checkout

The following methods and objects are available to this action through the use of the **context** argument.

Microservice Operation
