6. Click **Save**.

Disable Shipment Attributes

Kibo eCommerce prevents you from deleting shipment attributes through the user interface; however, if you no longer wish for a shipment attribute to be used, you can disable it.

Disabling a shipment attribute prevents it from being added to new shipments. When you disable a shipment attribute that's already in use, the system prompts you to confirm disabling the in-use attribute.

When you disable a previously used shipment attribute, the attribute value is still displayed on existing shipments, but you cannot edit the attribute value on those shipments.

To disable a shipment attribute:

1. Go to **System > Schema > Shipment Attributes**.
2. Expand the actions menu next to the applicable attribute and select **Disable**.
3. If prompted, confirm to disable the attribute.

Permissions

Shipment attribute management follows the existing extensible attributes permission model:

- Shipment Attribute Schema Visibility: Users with Order read behavior will be able to view shipment attribute schema under **System > Schema > Shipment Attributes**
- Schema Management: Users with extensible attributes permissions can create, read, update, and manage shipment attribute definitions.
